Hiring Team

Climate Analytics

Berlin, Germany

Subject: Application for the Student Assistant Role in the Climate Policy Team

Dear Hiring Team,

I am excited to apply for the position of Student Assistant within your Climate Policy Team at Climate Analytics. With a background in civil engineering and a strong focus on climate and environmental subjects, coupled with my current pursuit of a master's degree in artificial intelligence to tackle climate challenges, I am eager to contribute to your impactful projects like the 1.5°C National Pathway Explorer.

During my bachelor's studies in **Civil Engineering**, I gained valuable insights into sustainable infrastructure and environmental systems, laying the foundation for my passion for addressing climate change. Building on this, I am currently pursuing a **Master's in Artificial Intelligence**, where I am exploring data-driven solutions to complex climate challenges, including decarbonizing energy and transport systems.

Highlights of my qualifications include:

- **Interdisciplinary Knowledge:** My civil engineering background equips me with an understanding of environmental systems, while my AI studies provide advanced skills in data analysis and programming (Python).
- **Quantitative Expertise:** I have experience in data collection and structuring, particularly for climate-related projects, aligning with your focus on investment needs and mitigation policies for the transport sector.

- **Research and Development Skills:** In my [specific project or experience], I developed methodologies to analyze and model sustainable solutions, similar to the workflows required to downscale IAMs for country-level applications.
- **Strong Communication and Organization:** From preparing detailed reports and presentations to organizing collaborative meetings, I have demonstrated the ability to manage complex tasks efficiently.

Climate Analytics' mission to leverage science and policy to drive climate action resonates deeply with my own aspirations. I am especially drawn to the interdisciplinary nature of the role, combining technical expertise with meaningful contributions to global climate solutions.

I am currently enrolled at [Your University] and based in [City, Germany], fully prepared to relocate to Berlin and work in a hybrid capacity as needed. I am confident my academic background, technical skills, and commitment to climate action make me a strong fit for this position.

Thank you for considering my application. I have attached my CV for your review and would be delighted to discuss how my experience aligns with your team's goals in an interview.

Warm regards,

Saud Mohammad
